

## **Financial Management**

The Financial Management (FM) module is designed to provide students with the financial management tools necessary to support decision making. The focus is on understanding the role of financial management within an organisational context and developing a broad range of financial skills. These skills are of particular relevance to the roles of enabler and innovator and business partner.

In each of the topics in this module, the focus is on the application of numerical financial management techniques, but students are also expected to interpret their results and discuss non-financial issues that might impact on a decision.

Students are firstly introduced to the wider issues of financial management, including the economic and regulatory environment, before learning how to use the main treasury management techniques. The largest component of the syllabus covers investment appraisal and risk, and students focus on the application of a range of numerical techniques to capital investment projects. The topic of pricing requires the use of numerical skills in the application of various approaches to pricing of goods and services, and also to the specific issues involved in pricing of items that are transferred between divisions of an organisation or companies within a group. The final topic within the syllabus deals with specific techniques that are applied in the context of managing individual elements of an organisation's working capital. Throughout the FM syllabus, risk management is an integral aspect.

FM involves the use of numerical techniques, and it is therefore useful for students to have completed the Management Accounting module and be familiar with costing approaches, cost behaviour, etc. A number of techniques that are applied primarily in a business context in FM are developed and adapted as necessary for public services application in the Strategic Public Finance module.

## Syllabus topics

| Α | Financial management, financial institutions and sources of finance | 20% |
|---|---|-----|
| В | Treasury management   | 20% |
| С | Investment appraisal and risk management                            | 35% |
| D | Pricing   | 10% |
| Е | Working capital management  | 15% |

## Other information, including assessment

Prior knowledge: Financial Accounting (ethical principles)

Standards: n/a Validity:Up to and including

September 2023 examinations

Assessment: A 150 minute exam with 75 marks available

consisting of: 30 multiple choice questions (of 1 mark each); 3 short form questions of 5 marks each and 3 longer scenario questions of 10 markseach. The pass

mark is 50%.

| Overall Aim  | Learning outcome  | Content  |
|--|---|--|
| A Explain the role of financial management and the   | A1 Discuss the role of financial management within an organisation and the factors  | (i) Meaning of financial management and role of financial strategy   |
| economic environment in which organisations operate; describe the financial  | influencing the development of a financial strategy   | (ii) Influences on financial strategy including economic goals of stakeholders and shareholder wealth  |
| institutions and markets which facilitate financing and evaluate the relative merits of sources of finance available (20%) |   | (iii) Interaction between short-term goals and measures and long-term financial strategy   |
|  | A2 Explain the economic environment in which organisations operate  | (i) Macroeconomic issues - economic theories;<br>national income; inflation; unemployment; trade<br>deficits and surpluses; the trade cycle; |
|  |   | (ii) Macroeconomic policy targets and the impact of fiscal, monetary, interest rate and exchange rate policy on business                     |
|  |   | (iii) Sources of market failure and government intervention, such as competition policies, green policies, and financial sector regulation)  |
|  | A3 Explain the principles of financial funding and structure and evaluate the relative merits of different funding sources including calculating and interpreting the impact on relevant business performance | (i) An organisation's financial structure  |
|  |   | (ii) Short versus long term finance  |
|  |   | (iii) Sources of long-term finance – equity; debt; lease finance; venture capital  |
|  | indicators  | (iv) Raising long-term finance - rights issues; placing; public offer; listing; debenture issues   |
|  |   | (v) Equity sources and dividend policy   |
|  |   | <ul><li>(vi) Sources of short term finance and processes for<br/>securing them – overdraft; loans; trade credit;<br/>leasing</li></ul>       |
|  |   | (vii) Interest rate calculations such as simple and  |

| <ul> <li>(viii) Internal sources of finance and the divided decision</li> <li>(ix) Introduction to other approaches to rais including Islamic finance, venture capit crowdfunding</li> </ul> | ing finance, |
|--|--------------|
| including Islamic finance, venture capit<br>crowdfunding   |              |
| (v) The impact of financing on the financial   |              |
| (x) The impact of financing on the financial performance indicators for profitability, and risk  |              |
| A4 Describe the role and function of the main (i) Money and capital markets  |              |
| financial institutions and markets that (ii) Efficient Market Hypothesis   |              |
| (iii) Financial intermediaries, including inves<br>exchanges and commercial banks  | :ment        |
| (iv) Foreign exchange markets  |              |
| A5 Describe the investment regulatory (i) UK regulation  |              |
| environment (ii) The role of the Bank of England   |              |
| (iii) Application of ethical principles to invest decisions  | ment         |
| B Explain the role of treasury  B1 Explain the role of treasury management (i) The main activities of the treasury functions   | ion          |
| management and apply the tools and techniques used to manage financial risk (20%)  The factors leading to short, medium are term liquidity surpluses and deficits                            | d long       |
| (iii) Outsourcing the treasury function and t<br>shared services   | ne use of    |
| (iv) Treasury management instruments and   | techniques   |
| B2 Discuss and assess the financial risk (i) Types of financial risk - currency risk; ir risk; liquidity risk; credit risk; refinanci legal and regulatory risk; fraud and cor market risk   | ng risk;     |
| (ii) Mitigation of risk including the four T's   |              |

|  |   | (iii) Impact of market volatility   |
|--|---|---|
|  |   | (iv) Interpretation of yield curves   |
|  |   | (v) The role of insurance in risk management  |
|  |   | (vi) Credit default swaps   |
|  | B3 Discuss the use of financial instruments to hedge against interest rate risk and calculate, for a given hedging requirement, the most appropriate hedging strategy | (i) Interest rate forwards  |
|  |   | (ii) Interest rate swaps  |
|  |   | (iii) Options - floors and caps   |
|  | to hedge against FOREX risk and calculate, for a given hedging requirement, the most appropriate hedging strategy   | (i) Forward markets and use of forward contracts and synthetic forwards (money market hedges) |
|  |   | (ii) Synthetic agreement for forward exchange (SAFE   |
|  |   | (iii) Exchange-traded currency futures contracts  |
|  |   | (iv) Currency swaps   |
|  |   | (v) FOREX swaps   |
|  |   | (vi) Currency options   |
| C Apply financial investment                             | C1 Explain the process of appraising the viability of capital projects  | (i) Revenue versus capital expenditure  |
| appraisal techniques to<br>evaluate capital projects and |   | (ii) Identification of costs and benefits   |
| assess risk (35%)  |   | (iii) Taking account of risk  |
|  |   | (iv) Non-financial factors  |
|  | C2 Apply investment appraisal techniques to capital expenditure decisions and discuss their relative usefulness   | (i) Discounting   |
|  |   | (ii) Net Present Value  |
|  |   | (iii) Payback   |
|  |   | (iv) Discounted payback   |
|  |   | (v) Accounting Rate of Return   |
|  |   | (vi) Internal Rate of Return  |
|  | -   |   |

| (ii) Inflation (iii) Taxation (iv) Capital rationing – numerical analysis for single-period capital rationing; discussion of issues for multi-period capital rationing (v) Lease versus buy decisions  C4 Calculate and interpret the cost of capital  (i) The relative risk return relationship of different sources of finance (ii) The cost of equity including the dividend valuation model and the capital asset pricing model (iii) The cost of debt and other capital instruments (iv) The overall weighted average cost of capital (v) Risk adjusted discount rates (vi) Capital structure theory (vii) Practical considerations affecting the financing decision  C5 Apply appropriate techniques to measure the effect of risk in capital expenditure and other decision making  (i) Risk and uncertainty (ii) Attitudes to risk (iii) Models for incorporating risk – maximax; maximin; minimax regret; expected monetary value (iv) Decision trees (v) Sensitivity analysis calculations and optimism bias (vi) Simulation (vii) Adjusted payback | C3 Prepare an optimal investment plan taking into account additional financial constraints and discuss its usefulness | (i)   | Mutual exclusivity of projects - the asset replacement cycle and annual equivalent cost analysis |
|---|---|-------|--|
| (iv) Capital rationing – numerical analysis for single-period capital rationing; discussion of issues for multi-period capital rationing (v) Lease versus buy decisions  C4 Calculate and interpret the cost of capital  (i) The relative risk return relationship of different sources of finance  (ii) The cost of equity including the dividend valuation model and the capital asset pricing model  (iii) The cost of debt and other capital instruments  (iv) The overall weighted average cost of capital  (v) Risk adjusted discount rates  (vi) Capital structure theory  (vii) Practical considerations affecting the financing decision  C5 Apply appropriate techniques to measure the effect of risk in capital expenditure and other decision making  (i) Risk and uncertainty  (ii) Attitudes to risk  (iii) Models for incorporating risk – maximax; maximin; minimax regret; expected monetary value  (iv) Decision trees  (v) Sensitivity analysis calculations and optimism bias  (vi) Simulation   |   | (ii)  | Inflation  |
| C4 Calculate and interpret the cost of capital  (i) The relative risk return relationship of different sources of finance  (ii) The cost of equity including the dividend valuation model and the capital asset pricing model  (iii) The cost of debt and other capital instruments  (iv) The overall weighted average cost of capital  (v) Risk adjusted discount rates  (vi) Capital structure theory  (vii) Practical considerations affecting the financing decision  C5 Apply appropriate techniques to measure the effect of risk in capital expenditure and other decision making  (i) Risk and uncertainty  (ii) Attitudes to risk  (iii) Models for incorporating risk – maximax; maximin; minimax regret; expected monetary value  (iv) Decision trees  (v) Sensitivity analysis calculations and optimism bias  (vi) Simulation  |   | (iii) | Taxation   |
